Pro

a light scattering mechanism provided at the liquid crystal side surface of the opposite substrate; wherein

said opposite substrate has a transparent insulation substrate, and said light scattering mechanism comprises an uneven portion formed at the surface of the liquid crystal side of said transparent insulation substrate; and wherein

said light scattering mechanism comprises a flattened film formed to cover the uneven portion formed at the surface of the transparent insulation substrate.

15. (Amended) A reflection-type color liquid crystal display apparatus comprising: a liquid crystal driving element formation substrate on which a liquid crystal driving element is formed;

an opposite substrate which is opposite to said liquid crystal driving element formation substrate;

- a liquid crystal sandwiched between said liquid crystal driving element formation substrate and said opposite substrate;
  - a color filter provided on the driving element formation substrate; and
- a light scattering mechanism provided at the liquid crystal side surface of the opposite substrate; and

wherein said opposite substrate has a transparent insulation substrate, and said light scattering mechanism comprises an uneven insulation film formed on the surface of the liquid crystal side of the transparent insulation substrate.
